The article describes the flower morphology of two species with similar phenology. The descriptions are very detailed and clear; however, I believe that more photographs or diagrams could be useful to illustrate the different floral parts discussed. It would also be very interesting to see the frequency of pollinator visits. Additionally, I suggest checking the consistent use of italic font in the manuscript for citations. It should be used consistently. Personally, I prefer not to use italics for the names of authors because it is also used in the species names.
