# Toremifene

National Cancer Institute

## Source

National Cancer Institute. *Toremifene*. NCI Thesaurus. Code C1256.

A nonsteroidal triphenylethylene antiestrogen. Chemically related to tamoxifen, toremifene is a selective estrogen receptor modulator (SERM). This agent binds competitively to estrogen receptors, thereby interfering with estrogen activity. Toremifene also has intrinsic estrogenic properties, which are manifested according to tissue type or species. (NCI04)
