Review of: "Synthesis, ADME, Toxicity, and In Silico Molecular Docking Study of Novel β -Carboline Derivatives as Potential Inhibitor Anticancer Agents"

Sudhir Kumar Pal¹

1. Biotechnology, IILM Academy of Higher Learning, Noida, India

Although the manuscript is of quite interest, it is surprising to know that there is no section on materials and methods in the whole article. Without a methodology section, the manuscript is incomplete. Kindly update the section and revise the whole manuscript for better representation and judgment.

The Methods section should be aligned with the Results section. Moreover, a proper explanation of all the techniques and procedures followed should be presented. Formatting should be proper and in justified mode. There is no explanation of figures in the text. What certain figures justify needs to be present in the text.
