

Review of: "Investigating the Mechanical and Tribological Effects of MoS₂ Reinforcement in AZ91 Magnesium Alloy: A Comprehensive Experimental Study"

Kapil Singh

Potential competing interests: No potential competing interests to declare.

1. The paper is well written, hence it should be accepted with minor changes.
2. In Results and Discussion, the experimental results must be in tabular form and show how much percentage of tensile strength and hardness is increased after the addition of MoS₂.
3. Add one more output parameter, i.e., compressive strength, in the results
