Comments for Authors

1. There are many grammatical and typing errors in the manuscript. The authors must correct all the errors.
2. There is no scientific novelty in the contribution. Under introduction, the authors failed to critique prior research studies to highlight their weaknesses, which they attempted to address in their research.
3. The authors must improve the abstract of the manuscript, including numerical values.
4. All sections, including the introduction, results & discussion, and conclusions, should be completely rewritten crisply and concisely.
5. There are no experimental images in the manuscript. The authors must incorporate experimental images.
6. There is no evidence of the reinforcement particles present in the fabricated composite. The authors must incorporate the evidence.
7. The authors must cite the latest articles in the manuscript.
