In my opinion this so-called paper is an informative material and not a scientific article.

To be a scientific article, it should have a structure within which I can find:

- research objectives and hypotheses (what the authors propose to achieve as a result of the research activity they carry out);
- presentation of the current state of knowledge in the addressed field (what are the opinions of other authors who have published relevant works for the addressed field);
- detailed description of the research methodology used;
- an abstraction/formalization of the notions and terms used (in the field of creativity, as the engine of innovation, these mathematical abstractions/formalizations are well-known);
- presentation of the new elements that the work brings;
- the presentation of the results obtained, as a result of the research activity undertaken and highlighting some discussions;
- the presentation of pertinent and relevant conclusions that support the research objectives and are based on the results obtained by the authors.
