Dear Author,

Your manuscript is well-structured, clear and informative. May it would be necessary to modify a little in the manuscript.

- 1- Provide the measurments of the clinical examination pre- and post-operatively.
- 2- Include clinical images of the thoracic spine deformity, the wound and the prosthesis and T- Cane.
- 3- Assuring that the ethical approval was taken or exempted in your institution.
- 4- Assesment precisely the Berg scale pre- and post-operatively and its connotations.
- 5- Adding a Conclusion paragraph to summarise and emphasise the clinical masage and the value of this case report was added to the literature.

Thank you for your efforts and hope your paper cited and world-wide spreaded.

Yours Muhammed Fayez Aboujaib,
