Review of: "Spatial Analysis of Soil Fertility Using Geostatistical Techniques And Artificial Neural Networks"

Paulo Pereira[1]

1 Universidade do Minho

Dear authors,

Congratulations for your interesting work, which I think has merit to be published.

I have minor comments, which are mainly concerned with the way the work is presented and less with the contents. Nevertheless, I think these should be considered to improve the manuscript.

1 Figures and table captions

The legends (captions) of figures and tables should be revised, since most of them do not refer the study context or the study area. I suggest a detailed revision of all the captions, these must be the most complete as possible (with the study context and the study area, when applicable), because figures should be legible without the need to see the main text.

2 References

Please revise the way bibliographical references are cited (sometimes in Spanish, using "y") and listed at the end of the manuscript.

3 full stops, commas

Please revise all tables and use of numerical data. You are using commas when you should be using full stops (in English you must use full stops instead of commas in decimal numbering).

4 Pictures / photographs

Please consider to add pictures / photographs of the study area, since the only ones are aerial.

Regards
