

Review of: "Haematological and Biochemical Patterns in the Liver Function of a Syrup Made From Vitex Doniana Fruit"

Aline D'Avila Pereira

Potential competing interests: No potential competing interests to declare.

Congratulations on your manuscript.

I have very few considerations:

- Demonstrate the objectives in more detail and present the specific objectives.
- “For the experiment, groups of seven with 5 mice in each were conducted.” Seven? But there are 6 groups: 1 (negative control); 2-6 with 25, 30, 35, 40, and 45 ml
- "KCL" → KCl
