

# Review of: "Medical students' disease status of COVID-19: A multicenter study"

Batuhan Gencer

Potential competing interests: No potential competing interests to declare.

Thank you for this large dataset and appropriate study. It is important to emphasize the infection rate among healthcare professionals and students. Several corrections are necessary:

\*Please recheck the words "KP" and "KPK". Are they the same?

\*The emphasis on the work's commitment and why it was done should be made more specific. The construction of the introductory part should be made more comprehensive and detailed. It can be stated why research is done on health students and their possible contributions to the literature.

\*All Covid words (in text and table) should be replaced by COVID.

\*What are MBBS and BDS? The full word should be written the first time

\*Please clarify that for the participants of this study, 'medical students' or "medical and dental students"

\*Please provide the information for data collecting, for example, how you distribute the forms, how you access target participants

\*There is a need for a limitations section
