Potential competing interests: No potential competing interests to declare.

Interesting manuscript. I am pretty sure that it will arise interest among not only academics but decision makers as well. It is properly constructed. One can see the theoretical part, methodological and discussion parts. I would suggest to develop theoretical approach albeit the literature review can be evaluated as a proper one. The justification of the research should be more underlined, especially from Ethiopian perspective. Country seeks opportunity for any investments. Microfinance is a solution. Conclusions are based on premises but I vote for their development.
