Potential competing interests: No potential competing interests to declare.

- **Title Formatting:** In academic writing, it's standard to capitalize the first letter of major words in titles.
- **Literature Review and Focus:** Your paper broadly discusses AI and occupational health but lacks a specific focus. Enhancing the literature review, particularly in the use case section, with additional references will strengthen this aspect. Clarifying the main points and objectives at the start will provide a clearer direction.
- **Introduction and Structure:** An outline of the paper's structure in the introduction can guide readers and clarify your organization.
- **Methodology Explanation:** The foresight method using contrasting scenarios is effective but needs a more detailed explanation, including why certain scenarios were chosen.
- **Language and Grammar:** Pay attention to using correct punctuation and prepositions to improve readability and meaning.
- **Abbreviations:** When using abbreviations like "INRS," introduce the full French term first, followed by its English translation.
- **Expanding Related Work:** More references in the related work section will offer a richer context and show how your study relates to and diverges from existing research.
- **Visual Clarity in Figures:** Figure 1 requires more clarity, especially in how scenarios are presented. Consider using color coding, aligning scenario numbers with those in the text, and renaming Figure 1 as a table if it better represents its content.
- **Conclusion and Recommendations:** The conclusion should focus more on the findings of this work and include specific recommendations based on your research.
