The authors did a commendable job; however, the following points should be taken into consideration:

1. The chemical symbols should be correctly presented in the text.
2. The following statement in the methodology is unclear: "The second section (FD-G) was subjected to freeze-drying using a freeze-dryer machine (Search Tech Instrument, UK, LGJ-10) by peeling the skin of the ginger with a knife and then cutting it into thin slices of the same size for 7 days until totally dry and crushed." The authors should review the statement.
3. The text should be justified.
