Potential competing interests: No potential competing interests to declare.

I think the publication of this very interesting and philosophical commentary can contribute to the literature.

Since the article is in the "commentary" category, it may be difficult to make some additions. However, if it belonged to a more comprehensive category, I would suggest adding limitations and/or negative factors.

Perhaps the author could address this topic in another "commentary".

I thank the author for the opportunity to read this interesting paper.

Regards
