Potential competing interests: The author(s) declared that no potential competing interests exist.

‘Big, bright and bold’ are some of the key accessibility messages for people with vision impairment and I applaud the authors for attempting to standardise the format of posters to increase visibility for people with low vision.

The predictable layout is helpful and an example of inclusive design, which will also help people without vision impairment.

I realise the guidelines are evolving but hope they include using high contrast text, avoiding colour coding and providing alt-text descriptions of figures and images. It's also important that they are easily readable by apps like SeeingAI.
