# Metabolic myopathy due to lactate transporter defect

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Metabolic myopathy due to lactate transporter defect. ORPHA:171690*

Metabolic myopathy due to lactate transporter defect is a rare metabolic myopathy characterized by muscle cramping and/or stiffness after exercise (especially during heat exposure), post-exertional rhabdomyolysis and myoglobinuria, and elevation of serum creatine kinase.
