Potential competing interests: No potential competing interests to declare.

The paper presents an innovative approach to understand the dynamics of tourism, based on Agent-Based Modeling. During the review process, I have concluded the following remarks:

- The authors based their work on old references.
- The objectives of the research are not clear.
- Consider not including the code within the main content of the article.
- Figures are not written in English to be understood.
- The results of the experimental part are not clear. Consider summarizing results using tables and diagrams.
