

Peer Review

Review of: "Applying User-Centered Design Methods to Improve Perceived Usability of the NHS App"

Mokhtarrudin Ahmad¹

1. Faculty of Applied Communication, Multimedia University, Malaysia

The author has addressed the comments and suggestions provided in the previous round of review. The revisions made have significantly improved the overall clarity, coherence, and academic quality of the paper.

The methodology section is now clearly explained, with appropriate justification for the research design, data collection methods, and analysis techniques used. The approach taken is suitable for addressing the research objectives, and the methodology is sufficiently rigorous to support the findings.

In addition, the author has included future recommendations that are relevant and practical. These suggestions demonstrate a forward-looking perspective and provide a valuable contribution for future researchers and practitioners in the field.

Overall, the paper is well-written, methodologically sound, and contributes meaningfully to the body of knowledge. It is suitable for publication.

Recommendation: Accept for publication.
