Thank you for your work on Statistical Overview of Prevalence of Anaemia with Associated Socioeconomic and Demographic Factors in Nigeria. While the study presents some interesting findings, I suggest a simplification of the methods section overall. To make the experimental techniques clear and easy to understand for a wider audience, the language used to describe them can be simplified. When possible, avoid using complex scientific jargon and define or explain technical words using everyday language. To make the experimental techniques clear and easy to understand for a wider audience, the language used to describe them can be simplified. When possible, avoid using complex scientific jargon and define or explain technical words using everyday language. Certain experimental protocols have excessive intricacy, which adds needless complication. When it makes sense, summarize descriptions while keeping the most important details. Keep the description of the methodology's main phases concise and avoid becoming bogged down in unnecessary details. I hope to have a look at the revised version of the paper. Thank you.
