# Non-involuting congenital hemangioma

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Non-involuting congenital hemangioma. ORPHA:141179*

Non-involuting congenital hemangiomas (NICH) are a distinctive type of large congenital hemangioma that are fully formed in utero and differ from rapidly involuting congenital hemangiomas (RICH; see this term) mainly because they do not undergo a postnatal involuting phase.
