**Potential competing interests:** No potential competing interests to declare.

In general:

- The document is very interesting. Good use cases.
- I believe that more information is needed on what is or what is considered a sustainable future.

Specific:

- The figure 1 is confusing. I think it should better describe the process.
- Very interesting to make explicit all the inputs that must be considered (such as age, gender, cultural background, race, epistemic orientation, discipline of expertise/study, geographical location/origin, years of experience, social status etc)
