

Review of: "Attitude towards business activity risk: evidence using logit models for two groups of OECD countries"

Rajath Karangara

Potential competing interests: No potential competing interests to declare.

Great work in writing the paper and in providing valuable insights into entrepreneurship and its relationship with economic growth, particularly within two distinct groups of countries: developed and Latin American nations. However, there are a few areas in the paper that could be improved. The conclusion section provides an overview of your research, but it might be improved to give a more thorough and understandable explanation of the implications of your findings. Also, describe the ways in which your research advances knowledge about entrepreneurship and its function in the growth of the economy. Overall, the paper offers insightful information about the challenges and characteristics connected to entrepreneurship. The results of your study make a substantial contribution to the field of entrepreneurial studies, keep up the good work!!
