The article 'The Future of AI Chatbots in Higher Education' addresses an important problem involving AI-based tools in the classroom. While AI can be a great tool to improve education in the classroom by helping teachers produce novel teaching materials, challenge students with thought-provoking questions, and test student understanding in innovative ways, there is also a question of whether AI can undermine student learning. This article lists the issues at hand and provides viable short-term solutions. I look forward to more such work suggesting ways for teachers to implement AI safely, securely, and cautiously in the classroom.
