Dear Authors

The topic of the article is very important and relevant for framing of education policy guidelines, particularly in professional courses like medicine.

To enrich the paper, some suggestions are listed below for consideration.

1. More details on review methodology such as reference period /cutoff date of included articles will be useful. Limitations of the review should also be included along with any exclusion criteria of papers included
2. Did this review included papers on all systems of medicines or only Allopathy. pl. clarify.
3. The title 'Results: A literature review of telemedicine in the COVID-19 pandemic; a global picture' needs to be corrected. -as I understand that this review is not focusing on the tele-medicine but tele-education for medicine students?
4. Discussion on tele-education should include extent of availability of digitalized teaching-learning materials.
