

Review of: "Skin related health issues among health care workers due to utilizing of personal protective equipment during COVID-19 pandemic in Pakistan"

NAYAB AFZAL

Potential competing interests: The author(s) declared that no potential competing interests exist.

The researcher has made a good effort to identify a prevalent but under discussed problem facing the medical professionals. The results seem to be interesting, however a few suggestions are as follows

- 1.Sentences could have been more crisp and concise.
- 2.Tables lack uniformity of 'upper case' and 'lower case'.
- 3.Statistically significant correlations could have been calculated for associations of skin related issues with duration/type of PPEs used.
