V-MLL Fusion Protein Expression

National Cancer Institute

Source

National Cancer Institute. *V-MLL Fusion Protein Expression*. NCI Thesaurus. Code C45399.

Expression of a fusion protein that results from the translocation mutation t(V;11)(v;q23), which involves the human MLL gene and various fusion gene partners. The fusion transcript is the result of the translocation of genetic material from any one of several chromosomes to the 11q23 region. This fusion protein is associated with acute myelomonocytic leukemia.
