Rhinovirus C

National Cancer Institute

Source

National Cancer Institute. *Rhinovirus C*. NCI Thesaurus. Code C112409.

A species of non-enveloped, spherical viruses with a capsid with quasi T=3 icosahedral symmetry in the Picornaviridae family and Enterovirus genus. The genome is composed of single-stranded, positive-sense RNA. Rhinovirus C is found in humans and causes respiratory infections and the common cold. Rhinovirus C is transmitted via direct person-to-person contact and aerosols of respiratory droplets.
