

Review of: "Hepatoprotective Effect of the Ursolic Acid-Oleanolic Acid Mixture Administered Intragastrically in Mice with Liver Damage Induced by Anti-TB Drugs"

Mona M. AbdelMohsen

Potential competing interests: No potential competing interests to declare.

- The manuscript needs language editing and punctuation correction.
- Abbreviations should be given.
- Please rewrite the "Obtention" of UA/OA mixture section.
- In In vivo assay, you didn't mention the number of animals in each group, but from results, i figured out, they are 3!!!!!! Which is insignificant.
- In discussion which needs to be re-written, focus on your results not previous studies; what is the mechanism by which the mixture showed this activity? Why 10 mg/kg was more efficient?
- I don't know on what basis references was written; in text and in reference section, and what are "other references"!!!!
- Best regards
