**Potential competing interests:** The author(s) declared that no potential competing interests exist.

This study is a good one but some weakness points are present:

- 1\_ no control group
- 2\_ how authors decided the degree of SUI
- 3\_ how sample size calculation was done
- 4\_ please add figure to simplify methods
- 5\_ ethical code and date of approval
- 6\_ statistical tests are not appropriately used
- 7\_ sample size is very small
- 8\_ results should be based on urodynamic studies not only patient opinions
