Review of "Inadequacies of Sommerfeld's Front Velocity Definition"

The paper is good but needs improvement. The paper can be published provided that the authors address the following points:

1. The English language needs to be checked throughout the paper.
2. Include nomenclature with units.
3. The abstract should be enriched with major outcomes. The introduction needs to be structured.
4. A nomenclature should be added.
5. The specific novelty of the work should be highlighted over previous works.
6. The flow geometry of the model should be explained in detail.
7. A comparison table is not provided. Compare your results with previously published works in table format.
8. On what basis were the parametric values chosen? Do they correspond to a specific physical condition?
9. What are the advantages of the method applied?
