Potential competing interests: No potential competing interests to declare.

Please see the PDF attached to the "Supplementary data" section of the present review, with my suggestions in blue color.

Among my recommendations are the following:

1. The first page photo is not suitable for a paper concerning persons with ASD, as it is of a blind person!
2. Citing the references is not appropriate, the authors must cite the references in the scientific way
3. The article needs to be enriched with more references
4. As the article is dealing with the security of persons with ASD, it is important to put a few lines describing the nature of ASD
5. More explanation is needed to enrich the two Australian studies as related specifically to persons with ASD
