Overall, the Short Communication entitled "Measles: 1963-2023, Immunology of a Morbillivirus" is well written and the introduction informs the reader of the importance of this study, I could follow all the explanations throughout the manuscript, however, some typos and grammatical issues need to be corrected, and for these reasons, I recommend language editing. In my opinion, the topic is interesting, but some issues need to be addressed before publication.

1. I suggest authors to replace "casual" word with an appropriate synonym in abstract
2. I suggest authors to discuss more about history of measles: first outbreak, number of cases reported annually, fatality rate and recent outbreaks in world
