Potential competing interests: No potential competing interests to declare.

This research is exciting and focused on understanding consumer behaviour and choices regarding the use of shopping bags, explicitly emphasising the pro-environmental aspect of using reusable bags instead of single-use plastic bags.

However, the authors should address the following comments:

1. This research does not explicitly mention how shopping bags are used in Vietnam or how the country produces potentially dangerous bags. Hence, the authors should provide more details about the prevailing shopping bag usage practices in Vietnam, which need to be added to this article.
2. In the introduction section, only the rationale for conducting this research needs justification. The authors can justify the theory selection in the literature review part.
3. The authors should explain the research gap properly, highlighting how this research distinguishes itself from earlier studies.
4. The authors should also explain the relevance of all independent variables within the research framework. Furthermore, most of the observed variables seem irrelevant in this context.
5. This study was conducted in Vietnam in November 2020; how do these responses reflect the current population?
6. Authors should incorporate the research and practical implications of this research's results.
