# Review of: "Visualizing the Mind: A Deep Dive into Computer Vision and Psychological Phenomena"

This is a good interdisciplinary article, but I think it would be better with the following modifications

1.Less relevant literature survey, more references are recommended.

2.It would be nice to add an analytical presentation on the synergies associated with AI and human cognition.

3.There is a formatting problem with the superscript of document I.

4.Whether the case study section could appropriately describe the value of the practical applications they create.
