# V8-Asp/Glu Protein Cleavage Reagent

National Cancer Institute

## Source

National Cancer Institute. *V8-Asp/Glu Protein Cleavage Reagent*. NCI Thesaurus. Code C161895.

A protein cleavage reagent comprised of the bacterial serine proteinase V8-Asp/Glu that cleaves proteins into peptides at the C-terminal side of an asparagine, aspartate, glutamate or glutamine residue unless that residue is followed by a proline.
