

Review of: "Digital Skills and Learning in Tanzania Secondary Schools: Students and Teachers' Influence"

John Ekow Mbir Amoah

Potential competing interests: No potential competing interests to declare.

1. The Introduction should be clear and circumspective, there were certain statement which needs to be conjugated properly to bring out clear-cut meaning to the write a typical example is the quotation by Marshall & Ruohonen, 2013.
2. The last paragraph should be converted to meet the requirements of the statement of problem informing the study.
3. There were no research objectives, questions or hypothesis for the write-up making it a tedious task for any reader. In going forward research questions informing the study should be clearly stated to give a headway for the write-up.
4. The title should read Theoretical Framework and not "Framing" please.
5. A few grammatical errors are found in the literature review which needs to be thoroughly addressed and changes effected to the later.
6. Kindly check the captions of the tables they are in disarray.
7. The discussion should address the research questions raised which is missing from the write-up. In a nutshell there is no discussion.
