Potential competing interests: No potential competing interests to declare.

This article is a compelling read, and I commend the authors for their valuable research efforts. However, I have a number of concerns that warrant careful consideration for potential improvement:

Introduction

The introduction section of the scientific article is well-structured and provides a comprehensive overview of the research topic, the significance of studying women entrepreneurs in micro and small-scale enterprises (MSEs), and the existing gaps in the literature. The justification for the study is strong, emphasising the need for current and specific insights into the determinants of women's MSE business performance in Arba Minch town.

- Consider ensuring consistent terminology; for example, "land promise" could be clarified as "access to land premises" for consistency.
- It might be beneficial to briefly mention the expected contribution or significance of the study to the existing body of knowledge.
- Consider providing a brief summary or transition at the end of each subsection to enhance the flow between topics.

Methodology

- The rationale for choosing quantitative research is mentioned, but it would be beneficial to elaborate on why this approach was specifically suitable for testing the research hypotheses.
- Ensure consistency in terminology (e.g., "sample size from each sector" vs. "sample size from each stratum").
- When using formulas like the sample size calculation, it's good practice to provide a reference for the formula (e.g., Yamane, 2017).

Results and Discussion

- Expand the discussion by exploring potential reasons behind the observed relationships and the implications of these findings for policy or practice.
- Ensure consistent use of symbols across the section (e.g., Lack of Training (LTR) vs. LTT in earlier sections).

References

- Utilize literature that has been published within the last five years for your references and citations.

Nevertheless, this is a significant subject, and I extend my best wishes for success in your research endeavours!
