Angioimmunoblastic T-Cell Lymphoma

National Cancer Institute

Source

National Cancer Institute. *Angioimmunoblastic T-Cell Lymphoma*. NCI Thesaurus. Code C7528.

A peripheral T-cell lymphoma of mature T follicular helper (TFH) cells characterized by systemic disease and a polymorphous infiltrate involving lymph nodes, with a prominent proliferation of high endothelial venules and follicular dendritic cells. EBV-positive cells are nearly always present. It is a clinically aggressive lymphoma and seen mainly in older adults. (WHO 2017)
