Potential competing interests: No potential competing interests to declare.

The manuscript proposed an IoT-based solution to observe noise and improve air quality. The topic is interesting; however, the manuscript cannot be accepted at this round due to the following comments:

- 1- The story of the manuscript is about a project, not a paper.
- 2- The authors used "I" lots of times although they are two.
- 3- The manuscript should be rewritten to meet the standard of technical writing. It has errors in grammar and structure from the first sentence.
- 4- The authors should review the related literature and summarize it after the Introduction section.
- 5- It is called TinkerCad, not ThinkerCad.
- 6- The authors should implement this theoretical study into a practical prototype. Only a simulation study is not acceptable.
