

# Review of: "Systematic Review on Effective Psychotherapies And/or Combined Treatments With Patients With Severe and Comorbidity"

Reihaneh Firoozi Khojastefar

Potential competing interests: No potential competing interests to declare.

There are some points that I need to address:

The review may be subject to publication bias, as it only includes published articles. Unpublished studies or studies with negative or inconclusive results may not have been included, potentially skewing the overall findings and conclusions. Also, the authors primarily relied on scientific articles from European, American, and Latin American databases. This selection may introduce a language bias, as articles published in languages other than English, Spanish, or Portuguese may have been excluded. Therefore, relevant studies published in other languages may have been missed.
