

# Review of: "Analyzing the Science of Apple Juice: Insights Into Production, Preservation, and Health Effects"

Anabel Rodriguez

Potential competing interests: No potential competing interests to declare.

1. The information is very complete and conforms to what is indicated in the summary. However, the information is very general, and there is little information about new developments that allowed optimizing the apple juice process.
2. I suggest that the manuscript contain more information about new technologies or process alternatives that have improved apple juice quality, including how processing challenges were improved to reduce the negative impact on juice quality.
3. The vocabulary used is not at a scientific level.
4. On the other hand, I believe that there is irrelevant information in the manuscript. I suggest a grammatical revision because, sometimes, irrelevant information generates confusion in the reading of the text.
5. Emerging Trends in Apple Juice Production: Please add more information about previous studies.
6. Half of the references are old; please add more updated ones.
7. The English is not very clear. Sometimes, I have not been able to understand the text very well. Please, this manuscript should be reviewed by an editor.
