Recombinant Eotaxin

National Cancer Institute

Source

National Cancer Institute. *Recombinant Eotaxin*. NCI Thesaurus. Code C1531.

A recombinant therapeutic agent which is chemically identical to or similar to the endogenous chemokine eotaxin, a member of the C-C cytokine family which is chemotactic for eosinophils. The early increase in eotaxin paralleled eosinophil infiltration in the asthmatic lung tissue in animal models hinted a potential role for eotaxin in immunotherapy.
