**Potential competing interests:** No potential competing interests to declare.

- This research instrument is for western living conditions which are individualistic in nature, even though far away in the eastern world they are very different and have different social backgrounds.
- Please indicate which of the existing instrument models in use overlap and are appropriate and meet your criteria.
- In what age group is this instrument given, will differences in character between genders be looked for?
- Especially for mental health, how do natural disasters affect the condition of families with different individual backgrounds, for example natural disasters that occur in each country will also greatly influence the type of trauma and how to heal it?
- The tool for analyzing this research instrument is the same as using SPSS or a similar analysis tool?
- Influencing variables of health: dimensions and their determinants – A systematic review, research seems very good for determining measuring instruments that influence a person's health, but there must be room to include specific things too, so that it is better.
