The current study, titled "Green Strategies for the Synthesis of Quinolone Derivatives" (Ref: P5M2Z8), is a review article that covers an important subject. However, major revisions are needed considering the following points.

- The period of time covered by this study, in addition to the search engine(s) utilized, and the keywords, should be mentioned.
- The mentioned chemical name of the compound exhibited in Fig. 6 should be reconsidered: "6-(benzyloxy)-3,4-dihydroquinolin-2(1H)-one."
- The yield of each analog reported in the synthetic schemes by the green method should be inserted. Sometimes the identification of each analog synthesized is missing. Intensive attention should be directed to this point of revision requested.
- Attention to the presentation of this study, with enhancement of the language, should also be considered.
