Review of: "Driving Circular Innovation: From Business Model to Industrial Ecosystems"

Silvia Battino¹

1. University of Sassari, Italy

The paper explores the theme of circular innovation by looking at how business models can be reformulated to achieve sustainable economic goals. In particular, it focuses on the analysis of industrial ecosystems, highlighting the importance of territorial networks and synergies between actors to create a circular economy. Different economic and environmental perspectives are integrated into the research, providing reflections and future applications for companies and policymakers interested in improving coordination and planning strategies at different territorial scales. The article is supported by a relevant and up-to-date literature review and clearly sets out its objectives and methodology. The theoretical framework could be further supported by integrating the analysis of a specific case study to further deepen the spatial implications of the proposed models.
