**Potential competing interests:** No potential competing interests to declare.

A brief review of COVID-19 is quite important to current research.

In this review, the clinical features, the epidemiological parameters and mechanisms were discussed, as well as comparison with a few other coronaviruses. More highlights or guidelines should be of great significance to the research community. Besides, the virus evolved rapidly which makes it very difficult to deal with. In this review, the lack of fresh data and the evolution mechanism weakened its significance. (Many of the cited references were published in 2020.) In addition, it's better to compare with other coronaviruses at genomic level as well. Furthermore, the summary tables will help understand the clinical features and difference between those coronaviruses.
