Potential competing interests: No potential competing interests to declare.

1. What mathematical process did the researcher employ to calculate the percentages of the compounds?
2. The researcher is requested to provide the complete analyses for auditing and inspection purposes.
3. In Clip 3.1 of Figure X, what does the researcher intend by referring to themselves as a writer?
4. The researcher identified three final compounds, yet Figure One mentions ten. Could you clarify this discrepancy, and would it be advisable to omit the additional compounds?
5. The researcher should include a brief section on Structure-Activity Relationship (SAR), even if it's just a few lines.
