Potential competing interests: No potential competing interests to declare.

The topic is interesting, but the title is too long. It would be valuable to compare ginger with another plant known for its anti-inflammatory and antioxidant potential to clearly define the purpose of this study.

The number of samples used in the experimental analysis must be disclosed.

The typography needs improvement, including the use of italics, uniformity of units, and subscript characters in formulas.

Supplementary data containing the results was not provided for review.
