The manuscript under the title "Some Possibilities of Increasing the Completeness of Oil and Gas Recovery".

Although the author did a big work, big problems should be carefully addressed before consideration for publication.

1. In general, the entire work is described in a very unclear manner.
2. The organization of the paper is poor. improve overall writing and technical presentation.
3. Redrow figures 1, 6,7, 14, 15, 16, 17, 18, and 19.
4. The abstract part must be revised with the following contents (a small introduction, problem statement, how to solve this problem, the methodology used, findings, and conclusion on how your method is important for knowledge).
6. a summary of findings in the current literature and gap must be presented at the end of the literature reviewed, followed by a motivation statement behind the current work. Write a sentence or two on the uniqueness or novelty of the current work
7. The literature review and presentation of the novelty are not well described; The clarification of your novelty and originality should be improved in the last paragraph of the Introduction part.
8. in many places I found that the discussion is simply the description of the figures and images, which is not acceptable. Discussion should be based on the physics
9. The conclusion part is huge and should be summarized with the main important point of results conducted from this study.

My overall opinion about the paper is that it requires a major revision.
