**Potential competing interests:** No potential competing interests to declare.

The article entitled "Sustainable Agriculture and Climate Resilience in Türkiye: A Comprehensive Analysis" is well documented but there is always room for development.

-Abstract if the article is too long, the author should consize it.

-The problem statement is unclear, author is advised to re-structure it with the support of available literature from Türkiye or othere developing country prespective. few linkes are given for example, [<https://cer.salu.edu.pk/public/wp-content/uploads/2019/12/Impact-of-Climate-Change-on-Major-Crops-of-Pakistan-Dr-Magsi-70-to-77.pdf>

<https://cer.salu.edu.pk/public/wp-content/uploads/2019/12/Impact-of-Climate-Change-on-Major-Crops-of-Pakistan-Dr-Magsi-70-to-77.pdf>]

-Methodology of the article is not clear, how the data was collected and how it was analysed, and why the methodology was adopted, etc?

-Discussion part is missing, it seems that author has only articulated his/her results, but the results must be in contrast/compare while supporting available literature for discussion.

-Conclusion and suggestion part is missing, author should develop a separate heading for conclusion and suggestion. that will show that what knowledge gap was filled and what is controbution of the author.

-Author should review is carefully for grammatical and typo errors.

Generally, the article is accepted for publication with major review.
